Simulated observations (emulated fake-device trials); no hardware data.
width n
share of tasks
two-qubit gates
density
compiled depth
density
light-cone fault weight λ_LC
density
observable weight
share of tasks
|μ| — oracle (labels only)
share of tasks
noise components
readout weight λ_RO
gate share of λ_LC (rest: idle)
counts
development:
120 tasks (0 failed)
40 base circuits
10 designs/half, r = 100/half
final test (historical):
36 tasks (0 failed)
12 base circuits
10 designs/half, r = 100/half
confirmation:
50 tasks (0 failed)
25 base circuits
10 designs/half, r = 100/half
noise-composition study:
30 tasks (0 failed)
3 base circuits
10 designs/half, r = 100/half
development
final test (historical)
confirmation
noise-composition study (noise panel only)
